

GRIDLOCK
SOLAR SECURITY

SOLAR SECURITY

THE NEED

- A cost-effective and reliable solution to Photovoltaic system theft.
- Audible and visual alarm to deter potential thieves.
- Instant notification of theft in progress to appropriate security personnel.

THE SOLUTION

Gridlock Solar Security has developed a comprehensive line of products that are affordable, easy to install, and flexible while providing a strong deterrent to PV module theft. Our patent pending approach attaches each module to the security system in such a way that is virtually impossible to circumvent without alerting the authorities and damaging the modules. Our products are designed with a proprietary theft logic algorithm that is easy to install and difficult to defeat. The Gridlock system has standard features that make it robust and virtually failsafe.

FEATURES

- Back-up battery ensures continued system operation even in the event of utility power loss.
- NEMA 3R lockable enclosure.
- Security lockout key ensures only authorized personnel have access to the system.
- Tamper resistant security panel protects the control system.

WHAT'S AT STAKE?

- Expensive insurance deductibles.
- Lost power generation revenues.
- Unsightly property damage.
- Your peace of mind.

IN THE NEWS

“For those hoping to catch thieves red-handed, Gridlock Solar Security in Santa Rosa, Calif., offers a rooftop watchdog...”

-Stephanie Simon. The Wall Street Journal

GRIDLOCKSOLAR.COM

“Solar power, with its promise of emissions-free renewable energy, boasts a growing number of fans. Some of them, it turns out, are thieves.”

-Kate Galbraith. The New York Times
